

Board

Quick Start Guide

Your admin created a cloud dev environment for you. Follow these steps to get connected.

Get Connected

1

Run Setup

Unzip this folder and double-click "Setup Board" (macOS/Linux: .command, Windows: .cmd). This installs the VS Code extension and opens your board pass.

2

Enter Your Passphrase

VS Code will ask for the passphrase your admin shared with you. This decrypts your connection credentials.

3

Sign In (Entra ID boards only)

If your board uses Entra ID authentication, install the Azure CLI (<https://aka.ms/installazurecli>) and run 'az login' in your terminal before connecting. SSH key boards can skip this step.

4

Click Connect

The Board Pass card appears. Click Connect Now and you're coding on your cloud VM.

After Connecting

On first connect you'll be prompted to run first-time setup (Git identity + GitHub auth). Your projects are at ~/projects/. Run 'check' in the terminal to verify everything is healthy.

Commands

Board: Import Pass	Decrypt and install a .board-pass file
Board: Connect	Open a remote VS Code window on your VM
Board: Start / Stop	Start or deallocate the VM
Board: Run First-Time Setup	Configure Git + GitHub auth on the VM
Board: Open in Browser	Open code-server or VS Code Tunnel
Board: Show Pass	Show your Board Pass card again

Don't have a board pass? Ask your admin -- they'll create one for you.
